Acoustic LM partition

Metal facings and rock wool core

The acoustic LM partition allows the treatment of all industrial acoustic problems while keeping its thermal properties.

The sound reduction is enhanced and the perforation allows to obtain a good acoustic absorption index.

Rw (C;Ctr) = 31 (-2;-4) dB / αw = 1 Rw (C;Ctr) = 32 (-2;-4) dB / αw = 0,95

Design

The acoustic LM partition consists of LM panels with one perforated face.

The easiness and rapidity of assembly, adaptation to architecture and the possibility of later transformation are its major advantages compared with traditional structures.

Technical characteristics

Single width : 116 mm

Panels	LM 60	LM 80
Thicknesses mm	60 2.36"	80 3.15″
Maxi length cm	600 19.7'	600 19.7'
Uc	0.621 W/m².K 0.109 Btu/h.ft².°F	0.477 W/m².K 0.084 Btu/h.ft².°F

Facings

On 1 side, perforated galvanised steel sheet Z225 (225g/m² of zinc) of thickness $6/10^{th}$, smooth or lightly ribbed, (rib depth 0,6 mm 0.02") coated with polyester lacquer 25 μ m, lined inside with a fibreglass.

On the other side galvanised steel sheet Z225 (225g/m² of zinc), of thickness 8/10th lightly ribbed, (rib depth 0,6 mm $0.02^{\prime\prime}$), or smooth, coated with polyester lacquer 25 μ m.

Standard colour : iceberg white (near RAL 9010).

Acoustic LM partition

Metal facings and rock wool core

Installation

Assembly

The junction between panels is made by connection metal to metal avoiding.

Acoustic performances

Sound reduction index according to the standard NF-EN ISO 717-1 : panel of thickness 60 mm : Rw (C;Ctr) = 31 (-2;-4) dB panel of thickness 80 mm : Rw (C;Ctr) = 32 (-2;-4) dB

Acoustic absorption index according to the standard NF EN ISO 11654 : panel of thickness 60 mm : $\alpha w = 1$ () (mineral wool density 120 Kg/m³ 7.5 *lb/ft*³) panel of thickness 80 mm : $\alpha w = 0,95$ () (mineral wool density 135 Kg/m³ 8.4 *lb/ft*³)

Acoustic performances :

Sound reduction index according to the standard NF-EN ISO 717-1 : panel of thickness 60 mm : Rw (C;Ctr) = 29 (-3;-5) dB Consult the data n°0112 «Reports and approvals».

Semi flush glazing

Offered in two alternatives, the semi flush glazing consists of a glazing set, in factory or on site, into an white (close to RAL 9010) aluminium frame. The finishing semi flush profiles are clipped on site.

Application

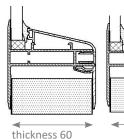

This glazing is used in controlled environment rooms, without any temperature or humidity restrictions.

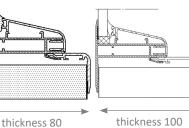

Characteristics

Variant 1: 1 single glass thickness 44-1 semi flush on one face of the panel, thickness 60 mm 2.36", 80 mm 3.15" or 100 mm 3.94"

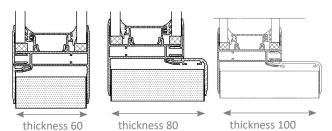

Variant 2 : 2 single glasses thickness 44-1 semi flush on the 2 faces of the panel, thickness 60 mm 2.36", adaptable on panels of thickness 80 mm 3.15" and 100 mm 3.94".

variant 1

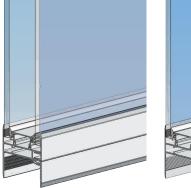

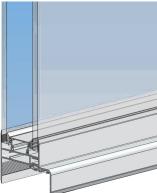

variant 2

Non contractual document - Dagard reserves the right to modify its products without notice.

Standards dimensions

dimensions	800 mm <i>2.62′</i>	1000 mm <i>3.28'</i>	1200 mm <i>3.94'</i>
800 mm 2.62'	٠	•	٠
1000 mm 3.28'	٠	•	٠
1200 mm <i>3.94′</i>	٠	٠	•

Specific dimensions on request (maximum surface 2 m² 21.5 sq.ft).

Variant with integrated blind only for double glazings

It is possible to integrate white Venitian blinds, manuals or automatics, and adjustable.

In manual control with rod or thin cord.

In automatic, control with remote control or button.

Semi flush door sheet leaf 60 2.36"

Semi flush frame for panels 60 mm 2.36", 80 mm 3.15" ou 100 mm 3.94"

Service door with semi flush frame on the 2 faces of the partition. The leaf consists of an aluminium honey comb or a mineral wool core bonded between two metallic facings.

Technical characteristics

Leaf

- 1 or 2 leaves of thickness 60 mm 2.36"
- sandwich structure
- aluminium honey comb or mineral wool core and aluminium structure profiles
- smooth galvanised steel sheet 8/10th not welded and heat-cured epoxy-polyester powder paint, iceberg white (close to RAL 9010), options : colour according to the chart (GSP-1208)

• mono component polyurethane glue

Door frame

- one piece semi flush frame for panels of thickness 60 mm 2.36", 80 mm 3.15" or 100 mm 3.94"
- frame in aluminium alloy 6060 T5 (standard NF EN 573)

Connections

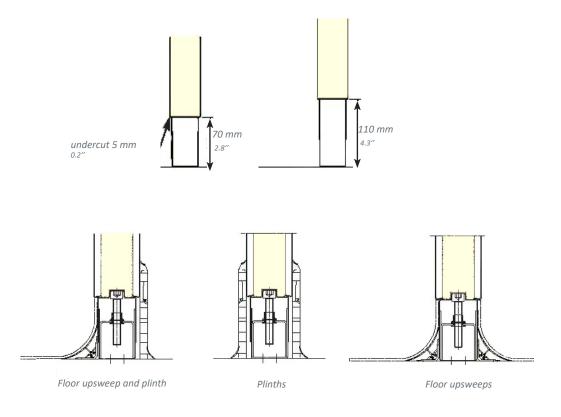

GSP-0307-E/B

Link with floor

By means of an adjustable metallic belt only for SG panels

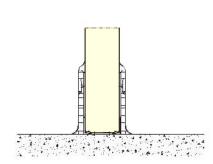

The adjustable metallic belt enables the level to be precisely adjusted while providing for a 5 mm 0.2" undercut here and there to enable the floor to be flush with the partition.

Plinth accessories (end-pieces, inside and outside angle trims) provide an excellent finish.

By U-shaped profile to the floor

Partitions are fastened to the floor by U-shaped PVC or metallic profile. Protection by plinth for both walls. It is set directly on the even, level and finished floor with shim if necessary in the U-shaped profile.

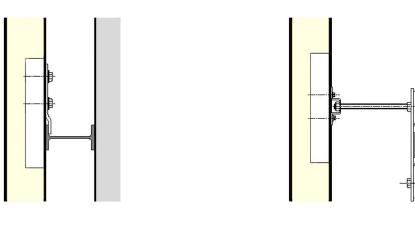

Partition fixings

The maximum height allowed for partitions made up of a single panel is 6 m 19.7' and 60 mm 2.36" thick. Above this height, or in certain precise cases (especially facades), the partitions must be stabilized with horizontal bars (case by case study).

Several solutions are available for securing the vertical partition to the frame of the existing building :

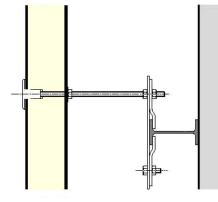

- **Fixing on insert (SG panels)**. An insert is sunk in the panel during manufacture. Therefore, no drilling of the panel occurs and there is no consequent thermal bridge. The diagrams below illustrate the various fixing methods.

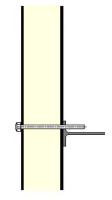

Clamp fixing

- Fixing by through mounting. Specific sleeves enable through fixing with «thermal breakdown» or through screws.

Fixing with sleeves

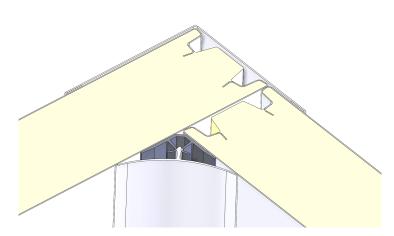

Fixing with through screws

Ceiling to partition junction

Tight sliding door on semi flush frame

Semi flush frame for panels of thickness 60 mm 2.36", leaf 40 mm 1.57" aluminium honey comb core

GSP-0318-E/A

The leaf consists of aluminium honeycomb core bonded between 2 metallic facings.

Sliding system with ramps and tightness on the 4 sides. Door easy to clean for an use in all clean rooms.

Technical characteristics

Leaf

- 1 leaf of thickness 40 mm 1.57"
- sandwich structure with a reinforced frame integrated
- aluminium honey comb core
- facing (colour according to the chart) : smooth galvanised steel sheet 6/10th and painted with epoxy-polyester powder, heat-cured.
- mono component polyurethane glue

Option :

- door with 2 leaves
- automatism

Door frame

- semi flush one-piece frame for panels of thickness 60 mm 2.36"
- galvanised steel Z225 frame, heat-cured epoxy-polyester powder coating.

Left or right opening.

Tightness

• airtight peripheral joint on the 4 sides

Sliding system:

The manual system consists in a track fixed directly on the frame with integrated ramps and butts. Aluminium track cover, easy to clean and designed to receive, without modification, an automatism. White colour close to RAL 9010.

Tight sliding door on semi flush frame

GSP-0318-E/A

Semi flush frame for panels of thickness 60 mm 2.36", leaf 40 mm 1.57" aluminium honey comb core

Permeability

The air permeability of the sliding doors has been measured and recorded in CETIAT test report N°1014119.

Permeability of a sliding door in m³/h depending on pressure or depression.

Nota :

- a door is under pressure when the action of the air tends to stick the leaf on the door frame
- a door is in vacuum when the action of the air tends to spread the leaf of the door frame

Use recommendation

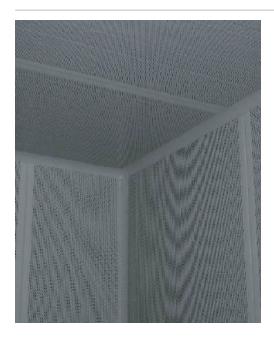

Automatic tight sliding doors don't comply the CO48 regulation, requiring an automatic opening, in case of lack of power, by an independent mechanical solution.

We propose as, an option, an opening by safety battery.

Acoustic LM ceiling

Metal facings and rock wool core

The acoustic LM ceiling allows to treat all industrial acoustic problems while keeping its thermal properties.

The sound reduction is enhanced and the perforation allows to obtain a good acoustic absorption index.

Rw (C;Ctr) = 31 (-2;-4) dB / α w = 1 Rw (C;Ctr) = 32 (-2;-4) dB / α w = 0,95

Design

The acoustic LM α ceiling consists of LM panels with one perforated face.

The easiness and rapidity of assembly, adaptation to architecture and the possibility of later transformation are its major advantages compared with traditional structures.

Technical characteristics

Single width : 116 mm 4.6"

Panels	LM 60	LM 80

Facings

On 1 side, perforated galvanised steel sheet Z225 (225g/m² of zinc) of thickness 6/10th, smooth or lightly ribbed, (rib depth 0,6 mm 0.02'') coated with polyester lacquer 25 μ m, lined inside with a fibreglass.

On the other side galvanised steel sheet Z225 (225g/m² of zinc), of thickness 8/10th lightly ribbed, (rib depth 0,6 mm o.o2''), or smooth, coated with polyester lacquer 25 μ m.

Standard colour : iceberg white (near RAL 9010).

Acoustic LM ceiling

Metal facings and rock wool core

Installation

Assembly

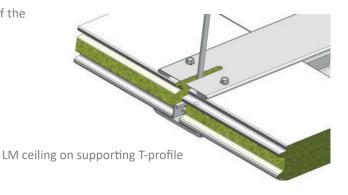

The junction between panels is made by connection metal to metal avoiding.

Ceiling suspended to the building

The ceiling is suspended under a slab, under the main framework of the building or under the second framework.

For LM panels, the ceiling fixings are supporting T-profiles.

Acoustic performances

Sound reduction index according to the standard NF-EN ISO 717-1 : panel of thickness 60 mm : Rw (C;Ctr) = 31 (-2;-4) dB panel of thickness 80 mm : Rw (C;Ctr) = 32 (-2;-4) dB

Acoustic absorption index according to the standard NF EN ISO 11654 : panel of thickness 60 mm : $\alpha w = 1$ () (mineral wool density 120 Kg/m³ 7.5 *lb/ft*³) panel of thickness 80 mm : $\alpha w = 0,95$ () (mineral wool density 135 Kg/m³ 8.4 *lb/ft*³)

Ceiling fixings

Ceiling fixings

Ceilings cannot be used as walkways but they are accessible for minimum maintenance. They enable a load of 150 daN 337.2 lbf at any point, i.e.: the weight of a man holding a tool case.

Ceiling panels generally rest on the vertical partitions and/or are suspended from a wire mesh frame which depends on ceiling accessibility, the size and frequency of openings for accessories.

The suspension frame is usually 2,40 x 1,20 m 7.9' x 3.9'. Openings exceeding 600 mm 23.6" must be strengthened by joists or additional bracket systems.

• when the maximum width of the clean room is $\leq a 2.40 \text{ m } 7.9'$, the ceiling rests on the walls.

• when the width of the room is greater than the span of ceiling panels, 2 types of frames are available to make the ceiling self-supporting:

- Omega frame

- mesh wire frame.

Ceiling secured by «Omega» fitting

Principle: Setting up of Omega fitting perpendicular or parallel to right of sealants.

The center distance between profile is according to the acceptable span of panels (limited at 2,40 m 7.9') or by the Omega capacity.

View of construction with suspension by Omega

Ceiling with mesh wire frame

<u>Principle</u>: Setting up of supporting mesh wire frames, braced together (at least 2) to make the ceiling self-supporting. <u>The center distance between the frame elements is function of the acceptable span of panels (limited at 2,40 m 7.87')</u> <u>or the frame elements capacity.</u>

View of a construction with secured to supporting frame

Framework height = 320 mm 12.6"

Fixing panel to frame

Frame length	Maximum center distance between frameworks	Frame length	Maximum center distance between frameworks
6,40 m 21'	2,40 m 7.9'	10,80 m 35.4'	2,20 m 7.2'
6,80 m 22.3'	2,40 m 7.9'	11,20 m 36.7'	2,00 m 6.6'
7,20 m 23.6′	2,40 m 7.9'	11,60 m 38.1'	1,80 m 5.9'
7,60 m 24.9'	2,40 m 7.9'	12,00 m 39.4′	1,70 m 5.6'
8,00 m 26.2'	2,40 m 7.9'	12,40 m 40.7'	1,50 m 4.9'
8,40 m 27.6'	2,40 m 7.9'	12,80 m 42'	1,40 m 4.6'
8,80 m 28.9'	2,40 m 7.9'	13,20 m 43.3'	1,25 m 4.1'
9,20 m 30.2'	2,40 m 7.9'	13,60 m 44.6'	1,15 m 3.8'
9,60 m 31.5′	2,40 m 7.9'	14,00 m 45.9'	1 m <i>з.з</i> ′
10,00 m 32.8'	2,40 m 7.9'		
10,40 m 34.1'	2,40 m 7.9'		

Base of calculation: Without clear elements, take into account

Uniformed load : 80 kg/m²

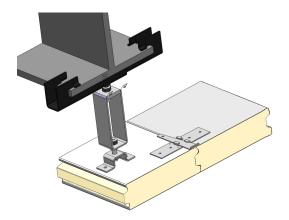

Safe deflection : 1/200th of span

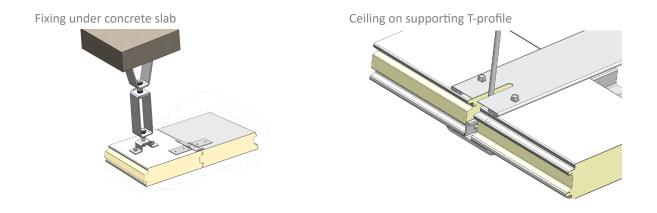

Ceiling fixings

Ceiling suspended from building

The ceiling is suspended under a concrete floor, under the main framework of the building or under a secondary framework. Fixing is assured by inserts on SG panels and by supporting T-piece for LG and LM panels.

You must define your project indoor and the outdoor type of atmosphere in order to select the most appropriate types of panel facings.

Indoor atmosphere

With no clean room specific data, we have to reply on food and food processing industries classification for metallic panel facing types.

Aggressivity	Cleaning	Hygrometry	Temperature	Examples	Minimum category of appropriate coatings (NF P34.301)	Recommended coatings
Ai 1 Non-aggressive environment	Regular maintenance	Low	-40°C to +25°C -40° to +77°F	Storage of wrapped dry products	I	Polyester 25 μm PVDF 35 μm
Ai 2 Non-aggressive environment	Regular maintenance	Average	0°C to +25°C +32° to +77°F	Storage in controlled atmosphere	II	PVC 120 μm PET 55 μm Stainless steel 304
Ai3 Non-aggressive environment	No Intensive cleaning	High	0°C to +25°C +32° to +77°F	Storage, processing moist ambient	IIIa	Stainless steel 304 + PVC + PET
Ai4 Slightly aggressive environment	No Intensive cleaning	High	0°C to +30°C +32° to +86°F	Preparation of pre-cooked foods	IVb	PVDF 35 μm PVC 120 μm PET 55 μm Stainless steel 304 Stainless steel 304 + PVC + PET
Ai5 Aggressive environment	Intensive cleaning	High	0°C to +35°C +32° to +95°F	Cooking rooms, dryers	Vc	PVC 120 μm PET 55 μm Stainless steel 304 Stainless steel 304 + PVC + PET
Ai6 Very aggressive environment	Very intensive cleaning	Saturated	0°C to +40°C +32° to +104°F	Showers washrooms	(*)	Stainless steel 304 + PVC + PET Stainless steel 316L

Extract from DTU 45.1 – Food handling facilities

N.B. :

• The table is provided as a guide only, the classes must be appropriate to the controlled conditions of each facility.

• A single parameter could justify the selection of ambient conditions (hygrometry, cleaning frequency, chemical aggressivity, salinity)

Aggressivity criteria

- 1 No aggressive ambient conditions: environment presenting no aggressivity due to corrosive chemical components and/or microorganisms.
- 2 Slightly aggressive ambient conditions: environment with no aggressive ambient conditions but whose walls could occasionally be splashed with slightly aggressive liquids.
- 3 aggressive ambient conditions: environment where acid, basic or saline acid vapours occur and/or with presence of microorganisms and/or likely to be subjected to disinfection.
- 4 very aggressive ambient conditions: environment where acid, base or saline acid vapours or gas occur and/or with presence of microorganisms and/or frequent risk of splashing of walls and/or likely to be subjected to disinfection with aggressive products.

Ion contractual document - Dagard reserves the right to modify its products without notice.

Cleaning criteria

- 1 regular maintenance: this involves regular supervision and occasional cleaning (frequency from one to several years according to the use of the facility) using non-aggressive methods and resources (no pressure washing).
- 2 non-aggressive cleaning (usually on monthly basis): cleaning performed with neutral products at temperature of < 30°C 86°F and low pressure spraying of \leq 0.3Mpa 6 266 lbf/sq.ft.
- 3 intensive cleaning (usually on daily basis): cleaning performed with neutral products (ph 5 to 9) at temperature of <40°C $104^{\circ}F$ and pressure of 3.5 Mpa 73 099 *lbf/sq.ft* (pressure of spray nozzle).
- 4 very intensive cleaning (usually on daily basis): cleaning performed with occasional use of extreme pH (<5 or >9) and/or high temperature (<60°C 140°F) and/or high pressure washing (pressure <5Mpa 104 430 lbf/sq.ft at output from nozzle and impact pressure <0.04Mpa 835 lbf/sq.ft).

Humidity criteria

- 1 humidity ambient conditions: ambient conditions are said to be «humid» where the hygrometry of the facility is high and if under the operating conditions of the facility there is a risk of condensation.
- 2 very humid ambient conditions: ambient conditions are said to be very humid where the hygrometry of the facility is very high and if under the operating conditions of the facility the risk of condensation is frequent.
- 3 saturated ambient conditions: ambient conditions are said to be saturated where the hygrometry of the facility is very high and if there is a permanent risk of condensation in the operating conditions of the premises.

Outdoor atmosphere

Outdoor atmospheres are classified by categories in order to comply with NF P 34-301 specifications for the selection of panel facings.

Rural or no polluted	Urban or in atmosp			Specific atmosphere				
atmosphere III	normal III	harsh	20 to 10 km 12.43 to 6.22 mi III	10 to 3 km 6.22 to 1.87 mi IV	< 3 km 1.87 mi V	mixte	high UV	special

Galvanized or coated with alloy (zinc and aluminium) steel

Polyester 25 μm 1mil	• •	• •	•	• •	-	-	-	-	•
PVDF 35 μm <i>1.3mil</i>	• •	• •	•	• •	• •	-	-	-	•

Special warning for HPL panel face

Compact laminated sheets are very sensitive to hygrometry conditions : high variation of dimensions under extreme high or low ambient humidity can occur.

For that reason, several precautions must be taken at the different production or delivery stages : HPL sheets or finished HPL panels must be stored under tight controlled ambient conditions: from 10 to 30° C 50°F to 86°F and relative humidity 40 to 60 %). Finished HPL panels should not be used under high temperature and/or high relative humidity conditions.

Storage and working conditions : The 2 sides of the HPL panels must remain aerated and within the average temperature range of 10 to 30°C 50°F to 86°F and relative humidity from 40 to 60 %.

Ignoring these warnings, bending or twisting of the HPL panels may occur.
