

The PVC coving sections are designed for the sanitary cladding of partition-to-partition and partition-to-ceiling angles. Their rounded shape facilitates the cleaning according to the hygiene rules. They allow perfecting the finish in the connecting angles of the work spaces.

## PVC coving section

Dagard offers three types of coving sections, rounded and smooth, designed for the sanitary casing of wall to wall and wall to ceiling junctions.

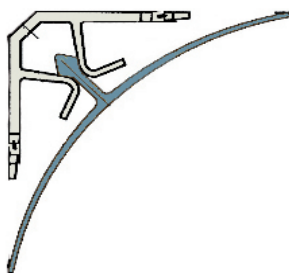

They are made of PVC profiles clipped on PVC angle bracket by screws or rivets or on aluminium support profile with T shape (supporting bracket) or L-shape.

Made of PVC profiles clipped on the angle bracket fixed by screws or rivets.

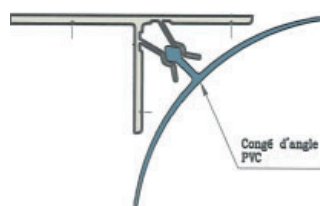

3-way angle shell fixed to reentrants.

Standard colour : iceberg white (near RAL 9010).

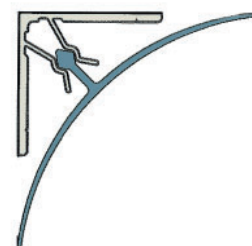

On request : sulphur yellow, horizon blue, canyon red, meadow green (or other colours according to colours chart).
