

Aluminium coving section

GSP-1004-E/B

The Aluminium coving sections are designed for the sanitary cladding of partition-to-partition and partition-to-ceiling angles. Their rounded shape facilitates the cleaning according to the hygiene rules. They allow perfecting the finish in the connecting angles of the work spaces.

Airtight aluminium coving sections

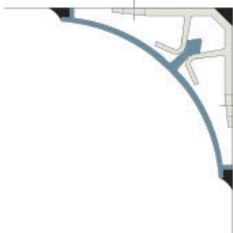

Dagard offers three types of coving sections, rounded and smooth, designed for the sanitary casing of wall to wall and wall to ceiling junctions.

They are made of rigid lacquered aluminium profiles clipped on PVC angle bracket by screws or rivets or on aluminium support profile with T shape (supporting bracket) or L shape.

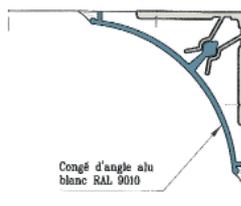

Mastic finish on all edges.

Lacquered aluminium internal and external connection pieces and nozzles totally flush.

Standard colour : iceberg white (near RAL 9010).
